

6. FUNCTIONAL AND PERFORMANCE TESTING

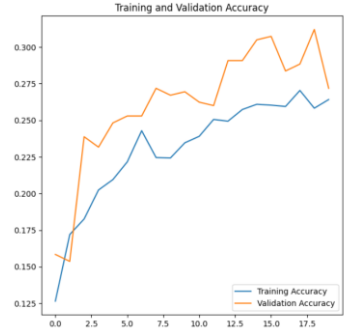

Date	28 June 2025
Team ID	LTVIP2025TMID35678
Project Name	Pattern Sense: Classifying Fabric Patterns Using Deep Learning
Maximum Marks	Marks

6.1 Performance Testing:

In this phase, we evaluated the performance and reliability of our Pattern Sense model using key metrics such as training accuracy, validation accuracy, and fine-tuning results. Functional testing verified whether the CNN model correctly classifies fabric patterns into predefined categories (striped, plain, polka-dotted, and checked). Performance testing focused on the accuracy of the model and improvements achieved after fine-tuning.

We used TensorFlow/Keras to build and evaluate the model. The CNN architecture included multiple convolutional and pooling layers followed by dense layers with dropout to prevent overfitting. The model was trained on a labeled dataset of fabric pattern images, and the results were tracked using graphs and logs.
